Bengaluru, India

Career Objective

Entry-level Software Developer skilled in Java, Data Structures, and Frontend Development using React.js.

Experienced in building real-time web applications with debugging and performance-focused features, seeking to contribute to scalable software projects.

Technical Skills

- Programming Language: Java, C,
- Web Technologies: HTML, CSS, JavaScript fundamentals
- Database & DBMS: SQL, database design concepts
- Tools: Visual Studio Code, Node.js, npm, Git

Education

- Master of Computer Applications – BMS Institute of Technology & Management Bengaluru | 2025-2027
- Bachelor of Computer Applications – BVVS College, Rani Channamma University | 2023-2025 | CGPA : 7.5/10
- Class XII – Karnataka State Board – 2021
- Class X – State Board – 2019

Internship

- ❖ Full Stack Development Intern – Dharwad–Hubballi Tutor academy
 - Assisted in developing and maintaining web applications using frontend and backend technologies.
 - Worked on UI components, debugging issues, and improving application performance.

Projects

- ❖ **Webitect** – Online Web Compiler
 - Developed a web-based compiler to write and execute HTML, CSS, and JavaScript code within the browser in real-time.
 - **Frontend:** Built using React.js with Hooks (useState, useEffect) for efficient state and lifecycle management.
Structured responsive UI using HTML5, CSS3, and modern JavaScript (ES6+) for dynamic and interactive user experience.
 - **Tools & Libraries:** Utilized JSZip library to enable client-side generation and download of project files as ZIP format.
Implemented DOMParser API for structured HTML parsing and validation to detect syntax and structural errors.
 - **Concepts:** Applied core concepts like state management, event-driven programming, and component-based architecture.
Enabled real-time rendering and live preview updates using efficient re-rendering and data binding techniques.
 - **Development Environment:** Developed and tested using Node.js and npm for dependency management and build processes.

Leveraged browser APIs such as iframe for sandboxed code execution and localStorage for persistent data handling.

❖ Theft Protection Tracking System

- Developed a theft detection system combining a **physical prototype** with a **web-based interface** to monitor and respond to theft activities in real time.
- Implemented an **instant alert mechanism** that notifies users immediately upon detecting suspicious activity, enabling quick response and reducing potential losses.
- Built the frontend using **React** and the backend using **Node.js** and **Express**.
- Used **MySQL** to efficiently manage and store alert logs and system data.
- Designed and created a **physical prototype** integrated with the software system to demonstrate real-world theft detection functionality.

Certifications

- Data Structures and Algorithms Using Java – Apna College

Strengths

- Analytical & Logical Thinking
- Effective Communication
- Adaptability & Quick Learning
- Critical Problem-Solving Abilities
